

5612 Praxis Test

Section: 5511 Fundamental Subjects Exams • Total Questions: 1 • Format: Verified Q&A

1. Distillation is one method of obtaining pure water, but this method is not currently used anywhere in the United States for municipal drinking water supplies. Which of the following statements best helps explain why distillation is not used for municipal water purification?

- (A) The purified water would become contaminated between the purification plant and the tap at home.
- (B) Water that has been distilled is not safe for human consumption.
- (C) The technology involved in distillation is too complex for individual municipalities to perform.
- (D) Distillation requires large amounts of energy and is expensive to perform on a large scale.
